ORGANISM: Mus musculus
PEATURE:
ORGANISM: MISC FEATURE
LOCATION: (1)...(381)
OTHER INPORMATION: SEQ ID NO 4 is the peptide sequence of mSPHKla in Figure 3, corre
OTHER INPORMATION: Sponding to amino acid residue 124 to 504 of SPHKla of GenBank se
OTHER INFORMATION: quence Accession Number AF068748. SEQ ID NO 4 is equivalent to SE
OTHER INFORMATION: Q ID NO 1 that is the amino acid sequence of SPHKla in Figure 1.
PUBLICATION INFORMATION:
AUTHORS: Kohama et al.,
TITLE: Molecular cloning and functional characterization of murine sphingosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: No. 6610534artis AG
TITLE OF INVENTION: Induction of blood vessel formation through administration of
TITLE OF INVENTION: polynucleotides encoding sphingosine kinases

Okumura K., Nagase T., Nomura N., Kikuchi H., Masuho Y., Yamashita R., Nakai K., Yada T., Nakamura Y., Ohara O., Isogai T., Sugano S.; "Complete sequencing and characterization of 21,243 full-length human
                                                                                                                                                                                Nat. Genet. 36:40-45(2004).

-!- PUNCTION: Catallyzes the phosphorylation of sphingosine to form ephingosine 1-phosphate (SPP), a lipid mediator with both intra-
sphingosine 1-phosphate (SPP), a lipid mediator with both intra-
and extracellular functions. Also acts on D-erythro-
dihydrosphingosine, D-erythro-sphingosine and L-threo-
dihydrosphingosine.
-!- CATALYIIC ACTIVITY: Sphingosine + ATP = sphingosine 1-phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bvent=Alternative splicing; Named isoforms=3;

```
The invention relates to modulating sphingosine kinase (SK) functional activity. The method involves contacting the SK with an agent for a time and under conditions to modulate phosphorylation of the SK where inducing or agenizing the phosphorylation down regulates SK activity and inhibiting or antegonizing the phosphorylation down regulates SK activity. The modulation of the phosphorylation is modulation of prolinedirected protein kinase catalyzed phosphorylation. The proline-directed regulation. The methods and agents are useful for treating and/or regulation. The methods and agents are useful for treating and/or prophylaxis of a condition characterized by aberrant, unwanted or inappropriate cellular activity or sphingosine kinase functional cativity, e.g. a neophastic condition or an inflammatory condition such as rheumatoid arthritis, atherosclerosis, asthma, autoimmune disease or inflammatory bowel disease. The present sequence represents a human SK

neurological, Novel human intracellular phosphorylation regulator polypeptides and polymucleotides for diagnosis, prevention and treatment of neurologic cell proliferative and autoimmune/inflammatory disorders.

Claim 1; Page 77-78; 96pp; English.

The present sequence represents a human regulator of intracellular phosphorylation (HRIP). HRIP is useful for screening agonists and antagonists of HRIP polypeptide. HRIP and its agonist or antagonist are useful for treating a disease or condition associated with decreased or increased expression of functional HRIP. Diseases treated or diagnosed include neurological disorders such as stroke, Parkinson's disease, demyelinating diseases, bacterial and viral meningitis and other disorders of the central nervous system, neuromuscular disorders, myasthenia gravis, cell proliferative disorders such as actinic keratosis, arteriosclerosis, atherosclerosis and cancer including leukaemia, melanoma, myeloma and cancer of the adrenal gland, bladder, bone, bone marrow, liver, lung, muscle, ovary, autoimmune/ inflammatory disorder such as Addison's disease, acquired immunodeficiency diseases,

The present invention describes primer sets for synthesising 5602 full-

[ad an oligo-dr primer and an oligonucleotide complementary to the

complementary strand of a polynucleotide comprises one of the 5602

nucleotide sequences defined in the specification, where the

complementary strand of a polynucleotide which comprises one of the 5602

oligonucleotide comprises at least 15 nucleotides; or (b) a combination

of an oligonucleotide comprising a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide which complementary to the

complementary strand of a polynucleotide which complementary to a

polynucleotide comprises a 1'-and sequence, where the

complementary strand of sequence is selected from those defined in the

polynucleotide comprises at least 15 nucleotides and the combination of

the 5'-end sequence 31'-end sequence is selected from those defined in the

specification. The primer sets can be used in antisense therapy and in

complementary full-length cDNAs. The primers are also useful for the

detection and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers are also useful for the

condas assily without any specialised methods. AAH03166 to AAH13628 and

AAH118613 to Path18742 repersent human cDNA sequences; AAB9244 to AAB95893

crepresent human amino acid sequences; and AAH13622 represent

oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RELVRSEELGRWDALVVWSGDGLMHEVVNGLMERPDWETAIQKPLCSLPAGSGNALAASI 120

The hek1 gene is located on chromosome 17q25.2. The sk1 converts the substrate sphingosine to sphingosine-1-phosphate (SIP). The sk1 gene and encoded polypeptide are applicable in screening drug candidates particularly inhibitors for preventing or treating disorders such as haemostasis, thrombosis, allergic reactions, proliferative diseases including cancer, haematopoietic disorders such as leukaenia, cardiovascular diseases such as stroke, atherosclerosis and coronary artery disease, dyslipidaemia, diabetes including type I and type II diabetes, autoimmune and inflammatory diseases such as multiple sclerosis, T helper-1 related diseases, chronic obstructive pulmonary disease, asthma, myocardial infarction, neurodegenerative disorders, natural wound healing processes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New human sphingosine kinase type I gene for screening drug candidates particularly inhibitors used for preventing or treating e.g. atherosclerosis, thrombosis, asthma and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The method of the invention involves administering sphingosine kinase to the animal. The method is useful for inducing blood vessel formation in an animal, or preventing or treating congestive heart failure, myocardial ischaemia, ischaemia-reperfusion injury and paripheral arterial diseases in an animal, e.g. mammal (such as primate including human). The invention is also useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Inducing blood vessel formation, or preventing/treating congestive heart failure, ischemia-reperfusion injury, myocardial ischemia and peripheral arterial diseases in animal, by administering sphingosine kinase.
sphingosine kinase 1; SPHK1; blood vessel formation; primate;
                                                                                                                                                                                                                                                                                                                                        RLFLAMEKGRHMEYECPYLVYVPVVAFRLEPKDGKG 336

ADJ75441 RESULT

The present invention describes a method of testing for bronchial asthma or chronic obstructive pulmonary disease. The method comprises determining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the expression level of the marker gene in a biological sample from a healthy subject, and judging whether the subject has bronchial asthma or chronic obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (S1) whose expression levels increase when respiratory epithelial cells are stimulated with interleukin-13; or (b) a group of genes (S2) whose expression levels increase when respiratory epithelial cells are stimulated with interleukin-13. Also described: (l) a reagent (l) for testing for bronchial asthma or chronic obstructive pulmonary disease; (2) a kit for screening for a candidate compound for a therapeutic agent or the transpersion of the read bronchial asthma or chronic obstructive pulmonary disease; (4) an inducer that induces bronchial asthma or chronic obstructive pulmonary disease; (6) a marker gene or an antisense nucleic acid corresponding to a portion of the marker gene or an antisense nucleic acid corresponding to a portion of the marker gene or an antisense nucleic acid corresponding to a portion of the marker gene, a ribozyme, a polynucleotide that suppresses the expression of the gene through an RNAi effect or an antibody recognising a procein encoded by a marker gene; and (7) a DNA chip for testing for chronic obstructive pulmonary disease, on which a probe has been immobilised to assay a marker gene. The method in gene through an supering for a probe has been immobilised to assay a marker gene. The present for hydron-hial asthma or chronic obstructive pulmonary disease. The probent can antisense the probe has been immobilised to assay a marker gene. The modulator may have cytostatic, antitipyroid, antidiabetic or ophthalmological activity. The method is useful for treating a subject having a tumourigenic or angiogenic disorder, in particular for treating cancer (for example breast cancer, colon cancer, lung cancer or prostatic cancer) and, for example, Grave's disease and diabetic retinopathy. The present sequence is the amino acid sequence of the novel isolated human 240 9 Treating subject having tumorigenic disorder or angiogenic disorder caused by aberrant polypeptide e.g., N-formylpeptide receptor or nucleic acid, by administering a modulator. obstructive pulmonary disease; (6) a therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease, comprising the compound, amarker gene or an antisease nucleic acid corresponding to a portion of the marker gene, a ribozyme, a polymucleotide that suppresses the expression of the gene through an RNAi effect or an antibody recognising a protein encoded by a marker gene; and (7) a DNA chip for testing for bronchial asthma or a chronic obstructive pulmonary disease, on which and antiasthmatic activities, and can be used in gene therapy. The method is useful for testing for or screening for a therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease. The present sequence is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                  The invention describes SPHK1, EDG4, EDG5, and EDG8 genes for diagnosing, treating, or preventing tumours and cancers in mammals. Also described are: diagnosing a cancer in a mammal, inhibiting cancer or pre-cancerous growth in a mammallan tissue; administering siRNA to a patient in need; clocking in vivo expression of a gene; screening a test molecule for blocking in vivo expression of a gene; screening a test molecule for SPHK1, EDG4, EDG5, or EDG8 antagonist activity; determining whether a test molecule has SPHK1, EDG4, EDG5, or EDG8 antagonist activity; cdetermining the efficacy of a therapeutic treatment regimen in a patient; conferming cancer or pre-cancerous growth in a mammalian tissue; agonists and inhibitors of SPHK1, EDG4, EDG5, or EDG8; and a pharmaceutical composition comprising the antibodies. The SPHK1, EDG4, EDG5, or EDG8, antibodies which specifically binds to SPHK1, EDG4, EDG5, or EDG8, and a pharmaceutical composition comprising the antibodies. The SPHK1, EDG4, EDG5, or EDG8 cancer, breast cancer, braid and neck cancer, braid and neck cancer, stomacr, or accer, head and neck cancer, stomach cancer, liver cancer. They can cancer, head and neck cancer, stomach cancer, or sophagus cancer. They can also be used as cancer vaccines. This is the amino acid sequence of human sphingosine kinase 1 (SPHK1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  243
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    YRRIGEMRFTIGTFLRIAALRTYRGRIAYLPVGRVGSKTPASPVVQQGPVDAHLVPLEE 257

The method is useful for identifying an agent that modulates sphingolipid metabolism for preparing a composition for treating a disease associated with altered sphingolipid metabolism in a patient, e.g., colon cancer, breast cancer, uterine cancer, stomach cancer, ovarian cancer, lung cancer, kidney cancer, adenocarcinoma of the rectum or hereditary sensory neuropathy type 1 or any one of the sphingolipidoses. The present sequence represents a human sphingosine kinase (SK) partial fragment

factor (TNP)-induced cellular activity. The ended involves contacting the cell with an agent under conditions sufficient to modulate the interaction of sphingosine kinase with a TNF receptor-associated factor (TRAF), preferably TRAF2, where inducing the association up-regulates cellular activity, and inhibiting the association down-regulates cellular activity. The agent is useful for manufacturing a medicament for treating a mammal with a condition of aberrant, unwanted or inappropriate cytokine-induced cellular activity. The methods are useful for modulating cytokine-induced cellular activity. The methods are useful for treating or preventing a condition of aberrant, unwanted or inappropriate

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB80404-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The mucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune consents, autoimmune thyroiditis, diabetes mellitus, Crobn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ..

vel nucleic acids and polypeptides, useful for treating disorders such central nervous system injuries.

WPI; 2001-442253/47. N-PSDB; AA161122.

Novel

88

The invention relates to human nucleic acids (AAL57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic,

Example 2; SEQ ID NO 6897; 10078pp; English.

     in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, cancer disagnosis and therapy, drug screening, assays for receptor activity, are activity, and inflammation, leuksemias and C.N.S disorders. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
